01 ON ORIGATION

This program is the work of a single originator, and it is presented as one complete, integrated system, not a set of parts to be taken piecemeal. The value is in the whole, and in the mind that can hold and carry the whole. A complex idea is easy to copy at the surface and impossible to copy at the depth. The imitator takes the fragment, files the paper, and calls the field his own, and the deeper version dies with the person who was never funded to build it. This is the older pattern in a new coat. The one who produces real value through actual adversity, and who lacks the documentation to fence it, is the ripest thing in the system to harvest and the least likely to be backed. Intelligensicus asks to be funded at its origin, in full, so that the version that gets built is the whole one.

02 THE INSTRUMENT IS THE VESSEL

A major ocean-science organization leads with its research vessel, because the vessel is its asset. Intelligensicus has a different asset, and for the funders it seeks it is a stronger one. The method is written across nine tracks. The outpost is designed and costed as a repeatable molded unit. The permitting is mapped from a career spent inside coastal development review. The measurement, the welfare standard, and the saturation model are complete. What a vessel is to an expedition, the finished instrument is to this program, and it is already built. The program does not need to be invented. It needs to be fielded.

03 THE CASE FOR BACKING THE ORIGIN

Capital that backs the documented copy over the undocumented origin is one reason the hardest problems stay unsolved, because the deep version keeps getting buried before it is built. The machine does not punish laziness and reward merit. It rewards documented merit and farms the rest. Intelligensicus is offered as the counter-move: a whole, integrated program, documented at its origin, from the person who authored it, funded before the copies arrive. The originator carries the whole design and can therefore adapt it in the field in ways a team assembled around a fragment cannot.

04 WHAT A FIRST BACKER GETS

A first backer does not fund a hope. It funds a finished method entering its first field, on a phased plan that spends the least where the risk is highest and advances only on demonstrated results. It funds the cheapest, fastest, least-encumbered tracks first, the corvids and the domestic-lineage species and the near-shore marine box, and it holds the expensive marine-mammal, primate, and elephant fieldwork until the method has proven itself. And it funds a program that is a conservation program at the same time, because every intervention targets survival and reduces conflict with people. The originator is the reason the whole thing coheres, and backing the origin is how a funder gets the whole thing rather than a copy of a piece of it.

Fund the origin, in full, and the version that gets built is the whole one.

INTELLIGENSICUS

*More intelligent life in the world, holding its own new
knowledge, of its own making.*
